The Geometry of Music: It is a simple fact that music is based on mathematics. Put simply, each note has its own vibration, and it is the frequency of the vibrations that distinguishes one note from another. The notes on each scale are seperated from one another by simple mathematical proportions and our ear is able to recognise that.

Harmony of the Spheres.

An octave of music is divided evenly into twelve semitones. Therefore, if you assign the twelve semitones of an octave of music to the twelve numbers on the clock, and draw a line from each number to each other number, you have a harmonisphere. The clock measures time clockwise forward and counterclockwise backward.

Pythagoras applied geometry to music when he noticed how dividing a string in half would double its pitch. He created the Pythagorean scale based on harmonic fifths, which is now used as a root in modern music. But according to Rankin, Pythagoras' scale led him to stumble upon the number 432, maybe without knowing its synchronistic implications.
