For the first time since its publication in 1999, Colorado's best-selling book of all time, "the big brown leather book," is being improved. Over 200,000 copies of it and its brethren, Colorado 1870-2000 Vol. II, and Colorado 1870-2000 Revisited: The History Behind the Images have been sold. John Fielder's then & now project to stand where W.H. Jackson stood in the 19th century and make his photos all over again has influenced, stimulated, and entertained Coloradans like no other history book nor coffee table book. John Fielder has rescanned the original transparencies that he shot for the project, and digitally edited the original Jackson negatives, to reveal new details not visible in previous editions. From downtown Denver in the 1880s to the top of Mount of the Holy Cross, you will see as never before change for the better and worse, lots of change or none at all, as Fielder tracks from one end of the state to the other Jackson's early Colorado explorations.

"I can think of no better guides than Professors Ken Gregory and John Lewin to lead the reader through the conceptual basis of this exciting science." - Victor R. Baker, University of Arizona "A very readable and informative introduction to the discipline for senior undergraduates, postgraduates and researchers." - Angela Gurnell, Queen Mary University of London "Time will tell, but this book may well mark a turning point in the way students and scientists alike perceive Earth surface processes and landforms." - Jonathan Phillips, University of Kentucky This student focused book provides a detailed description and analysis of the key concepts, ideas, and hypotheses that inform geomorphology. Kenneth Gregory and John Lewin explain the basics of landform science in 20 concepts, each the subject of a substantive, cross-referenced entry. They use the idea of the 'geomorphic system' to organise entries in four sections, with extensive web resources provided for each: System Contexts: The Systems Approach / Uniformitarianism / Landform / Form, Process and Materials / Equilibrium / Complexity and Non Linear Dynamical Systems System Functioning: Cycles and cascades / Force-Resistance / Geomorphic work / Process Form Models System Adjustments: Timescales / Forcings / Change Trajectories / Inheritance and Sensitivity / Anthropocene Drivers for the Future: Geomorphic Hazards / Geomorphic Engineering / Design and Prediction Aligned with the teaching literature, this innovative text provides a fully-functioning learning environment for study, revision, and even self-directed research for both undergraduate and postgraduate students of geomorphology.
