David J. Wallin: Attachment theory was and is primarily a theory of development. Secondarily, it's a theory about how development goes awry and results in what we might call psychopathology. It's also generated a lot of research. But it's not primarily a clinical theory.

This eloquent book translates attachment theory and research into an innovative framework that grounds adult psychotherapy in the facts of childhood development. Advancing a model of treatment as transformation through relationship, the author integrates attachment theory with neuroscience, trauma studies, relational psychotherapy, and the psychology of mindfulness. Vivid case material illustrates how therapists can tailor interventions to fit the attachment needs of their patients, thus helping them to generate the internalized secure base for which their early relationships provided no foundation. Demonstrating the clinical uses of a focus on nonverbal interaction, the book describes powerful techniques for working with the emotional responses and bodily experiences of patient and therapist alike.

"The study of attachment has yielded important discoveries about parent-child relationships, the internal world, and psychopathology.

If you have read other books about love that have fallen short, read this book. Mapping the Terrain of the Heart is an eloquent guide through love's diverse landscapes that provides a whole new way to think about love relationships. Both descriptive and prescriptive, it is a book for anyone looking to experience a committed relationship full of passion and tenderness. In the labyrinth of love, every one of us has his or her own inner map. Psychologists Goldbart and Wallin

lead us along the metaphorical superhighways on the map of love by charting six easily grasped skills—the six capacities of love—that are all necessary to a long-term, stable love relationship: the capacities for erotic involvement, for merging, for idealization, for integration, for "refinding," and for self-transcendence. The authors demonstrate in a very practical, hands-on way how individuals and couples can use these capacities to work on breaking down their usual defenses and grow toward a deeper understanding and connection. In defending ourselves against disappointment in love, we frequently—and often unknowingly—throw up obstacles, create roadblocks, and take detours around these six capacities. We think such detours will take us where we want to go in a relationship, but too often they do not.

Goldbart and Wallin's sophisticated but accessible approach—using case studies and practical pointers throughout—based on solid psycho-analytic theory while creating a completely new model for love relationships that also makes intuitive sense. Mapping the Terrain of the Heart offers a comprehensive psychology of love that maps out the paths to a successful relationship and shows how both individuals and couples can progress toward that ever-elusive goal of lasting and passionate love.

Drawing on research in the fields of cognitive and developmental psychology, attachment, trauma, and neuroscience, as well as 20 years in forensic and private practice, Paul Renn deftly illustrates the ways in which this

research may be used to inform an integrated empirical/hermeneutic model of clinical practice. He suggests that silent, invisible processes derived from the past maintain non-optimal ways of experiencing and relating in the present, and that a neuroscience understanding of the dynamic nature of memories, and of the way in which the implicit and explicit memory systems operate and interact, is salient to a concomitant understanding of trauma, personality development, and therapeutic action. Specifically, Renn argues that an intersubjective psychodynamic model can use the power of an emotionally meaningful therapeutic relationship to gradually facilitate both relational and neurological changes in patients with trauma histories. Taken as a whole, these themes reflect a paradigmatic shift in

A comprehensive treatment approach for the repair and resolution of attachment disturbances in adults, for use in clinical settings. With contributions by Paula Morgan-Johnson, Paula Sacks, Caroline R. Baltzer, James Hickey, Andrea Cole, Jan Bloom, and Deirdre Fay. Attachment Disturbances in Adults is a landmark resource for (1) understanding attachment, its development, and the most clinically relevant findings from attachment research, and (2) using this understanding to inform systematic, comprehensive, and clinically effective and efficient treatment of attachment disturbances in adults. It offers an innovative

therapeutic model and set of methods for treating adult patients with dismissing, anxious-preoccupied, or disorganized attachment. In rich detail, it integrates historical and leading-edge attachment research into practical, effective treatment protocols for each type of insecure attachment. Case transcripts and many sample therapist phrasings illustrate how to apply the methods in practice. Part I, "Foundational Concepts," features a comprehensive overview of the field of attachment, including its history, seminal ideas, and existing knowledge about the development of attachment bonds and behaviors. Part II, "Assessment," addresses the assessment of attachment disturbances. It includes an overview of attachment assessment for the clinician and a trove of practical recommendations for assessing patients'

attachment behavior and status both outside of and within the therapeutic relationship. In Part III, "Treatment," the authors not only review existing treatment approaches for attachment disorders in adults, but also introduce an unprecedented, powerful new treatment method. This method, the "Three Pillars" model, is built on three essential clinical ingredients: Systematically utilizing ideal parent figure imagery to develop a new positive, stable internal working model of secure attachment Fostering a range of metacognitive skills Fostering nonverbal and verbal collaborative behavior in treatment Used together, these interdependent pillars form a unified and profoundly effective method of treatment for attachment disturbances in adults—a must for any clinician. In Part IV, "Type-Specific Treatment," readers will learn specific

variations of the three treatment pillars to maximize efficacy with each type of insecure attachment. Finally, Part V, "A Treatment Guide and Expected Outcomes," describes treatment in a step-by-step format and provides a success-assessment guide for the Three Pillars approach. This book is a comprehensive educational resource and a deeply practical clinical guide. It offers clinicians a complete set of tools for effective and efficient treatment of adult patients with attachment disturbances.

Attachment research has tremendous potential for helping clinicians understand what happens when parent–child bonds are disrupted, and what can be done to help. Yet there remains a large gap between theory and practice in this area. This book reviews what is known about attachment and translates it into practical guidelines for therapeutic work. Leading scientist-practitioners present innovative strategies for assessing and intervening in parent–child relationship problems; helping young children recover from maltreatment or trauma; and promoting healthy development in adoptive and foster families. Detailed case material in every chapter illustrates the applications of research-based concepts and tools in real-world clinical practice.
