The 3-2-1 Series II was criticized for its performance with music and for lacking an HDMI connection but praised for its performance for movies. The 3-2-1 GSX model, which was released in 2005, included an internal hard drive for storing music. In 2008, the 3-2-1 Series III replaced the Series II and added an HDMI output connection.

What is the difference between the newer Bose 3-2-1 GS Series III as compared to their previous version, the Series II. The Series III is available for \$999 online (I can't find anyone selling it cheaper). And the Series II is available for a variety of prices, from \$699 to \$999. Does anyone know what the difference is between the two series (aside from the prices).

The 3-2-1 was replaced by the "321 Series II" in 2004, which included two small speakers and a subwoofer. The 321 Series II was praised for its performance for movies, but was criticised for its performance with music and for lacking a HDMI connection. The 321 Series II GS had similar outcomes, however it was also criticised for value for money.

Bose has opted for just a single full-range driver, which fires downwards into an acoustic deflector to spread sound 360 degrees from its ovalur chassis. This means you're getting uniform mono sound all the way round, which is a canny idea when you bear in mind the numerous speakers that have tried and failed to deliver cohesive 360-degree sound from multiple drivers.
