Demonstrating analytical and numerical techniques for attacking problems in the application of mathematics, this well-organized, clearly written text presents the logical relationship and fundamental notations of analysis. Buck discusses analysis not solely as a tool, but as a subject in its own right. This skill-building volume familiarizes students with the language, concepts, and standard theorems of analysis, preparing them to read the mathematical literature on their own. The text revisits certain portions of elementary calculus and gives a systematic, modern approach to the differential and integral calculus of functions and transformations in several variables, including an introduction to the theory of differential forms. The material is structured to benefit those students whose interests lean toward either research in mathematics or its applications.

“Secular-minded readers seeking an alternative to *The Purpose-Driven Life* have an excellent starting point here.”—Publishers Weekly For readers who are serious about confronting the big issues in life—but are turned off by books which deal with them through religion, spirituality, or psychobabble, this is an honest, intelligent discussion by a philosopher that doesn't hide from the difficulties or make undeliverable promises. It aims to help the reader understand the overlooked issues behind the obvious questions, and shows how philosophy does not so much answer them as help provide us with the resources to answer them for ourselves. “Useful and provocative.”—The Wall Street Journal “Looking for a clear guide to what contemporary philosophy has to say about the meaning of life? Baggini takes us through all the plausible answers, weaving together Kierkegaard, John Stuart Mill, Monty Python, and Funkadelic in an entertaining but always carefully reasoned discussion.”—Peter Singer, author of *How Are We To Live* “The question of the meaning of life has long been a byword for pretentious rambling. It takes some nerve to tackle it in a brisk and no-nonsense fashion.”—New Statesman

A discussion of the science of human personality offers the latest findings from brain science and genetics to explain what determines the choices we make, looks at the different personality types, and blends true-life stories with scientific research to explore why some people are worriers and others wanderers.

Three dragon siblings, the last of a dying breed, are pitted against each other as their empire is filled with war, greed, and treachery, and they must decide whether to stand with, or against, humans.

Aaron Corbet isn't a bad kid -- he's just a little different. archangel On the eve of his eighteenth birthday, Aaron dreams of a darkly violent landscape. He can hear the sounds of weapons clanging, the screams of the stricken, and another sound he cannot quite decipher. But gazing upward at the sky, he suddenly understands. It is the sound of great wings, angels' wings, beating the air unmercifully as hundreds of armored warriors descend on the battlefield. Orphaned since birth, Aaron is suddenly discovering newfound -- and sometimes supernatural -- talents. But not until he is approached by two men does he learn the truth about his own destiny, and his role as a liaison between angels, mortals, and Powers both good and evil, some of whom are hell-bent on his own destruction....

One extremely helpful remedy of the past, described in this volume, was the use of charcoal in the treatment of bloody dysentery, probably as a complication of then common typhoid fever. Charcoal is generally beneficial in all forms of stomach and bowel upset. Its use at present should help to absorb the poisons from infections such as with the toxic strains of *E. coli* that can cause life threatening bloody diarrhea as well as other serious complications. Practical treatments are described for from stomach upset to eye infection, cough, and constipation. The external as well as the internal use of herbs and charcoal is described. This book is a comprehensive compilation of Spirit of Prophecy discussion regarding the subjects mentioned in the title as well as related items such as stimulants and narcotics. The focus is on the frequently perceived great divide between the simple, natural medicines readily used at home and the evolving complex drug medications prescribed by health professionals during the last 160 years. The some 335 unique referenecs (many with multi-paragraphs) are organized by date of authorship. There are two useful indices—the first by treatment and the second by disease. There are nine appendices with helpful, not otherwise readily available, ancillary material.
