Seidel et Stokes s'efforcent de résoudre le problème au moyen des notions de "série qui converge aussi lentement que l'on veut", ou de "convergence infiniment lente". En 1853 Cauchy reconnaît son erreur antérieure et établit le théorème correct, sans toutefois user du terme "convergence uniforme".

~~2013 Cauchy, Abel, Seidel, Stokes et la convergence uniforme.~~

The Theory of Uniform Convergence was treated by Cauchy (1821), his limitations being pointed out by Abel, but the first to attack it successfully were Stokes and Seidel (1847-48). Cauchy took up the problem again (1853), acknowledging Abel's criticism, and reaching the same conclusions which Stokes had already found. Thomé

Introduction. The fundamental theorem of calculus states that the integral of a function  $f$  over the interval  $[a, b]$  can be calculated by finding an antiderivative  $F$  of  $f$ :  $\int_a^b f(x) dx = F(b) - F(a)$ . Stokes' theorem is a vast generalization of this theorem in the following sense. By the choice of  $F$ ,  $dF / dx = f(x)$ . In the parlance of differential forms, this is saying that  $f(x) dx$  is the exterior derivative ...

He left without his degree, and spent 15 years teaching secondary school, during which period his mathematical work was ignored. In 1854, at age 40, he published an important paper on Abelian functions which took the mathematical ...
