total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 256 contributions included in the DUXU proceedings were carefully reviewed and selected for inclusion in this four-volume set. The 69 papers included in this volume are organized in topical sections on design for health; design for reading and learning; design for

mobility, transport and safety; design for rural, low literacy and developing communities; design for environment and sustainability; design for human-computer symbiosis.

This book is a concise guide written by two individuals who have been there—under the lights and in front of the camera. Its no-nonsense approach offers readers practical advice about on-camera performance, including key aspects of voice, movement, communication and appearance. It gives them a foundation for working in the studio, in the field and in front of an audience; it is ideal for media performers of any type, including those who work as reporters, company spokespersons, or community advocates.

Recommendations include how to

properly position oneself for a shot, how to improve articulation, how to deal with stress and how to best perform online. "Try-It-Out" exercises help readers put what they have learned into practice and prepare to be on camera. Key terms are bolded in the chapters and are collected in a book-end Glossary for easy reference.

Provides advice on how to evaluate the vulnerable points in a home, fortify the property discreetly, select security systems, choose weapons and use them under stress, and interact safely with aggressors.
