The electrostatic precipitator is suitable for collecting large particulate matter, and the fabric filter is suitable for collecting fine particles. In the ESP-FF, most of the fly ash in the flue gas is collected in the electric field, and then the remaining fine particulate matter is collected by the fabric

This is an example of application to exhaust gas processing from a pulverized coal-fired boiler. We reduced the size of the fabric filter by increasing the filter bag length to 9 m (normal length is 6.0 m or 6.9 m). Using a long filter bag for a large quantity of process gas made it possible to reduce the size of the device.

File Type PDF Fabric Filter Solutions For Large Coal

The wastewater then flows through the filter fabric from the inside to the outside of the drum. Solids that are too large to pass through the filter fabric are removed from the fabric by a mechanism at the highest part of the rotating drum. These collected solids flow via a trough to a collection tank.
