I always thought that flying the gyro would be an excellent way to teach touchdown autorotations in a helicopter—eliminating the chance of a skid digging in. In the same vein, B.J. Schramm—founder of Rotorway, stopped by the airport 20 years ago to demonstrate his latest project—a single-place Helicycle compound helicopter—with or ...

Unlike an airplane, the gyroplane does not stall. If airspeed gets too low it simply descends in whatever pitch attitude you have the aircraft in. The rotor blades continue to generate lift just not enough to support level flight. Thus, you really never exceed any critical angle of attack like you can do in an airplane.
