Hence, an introductory chapter on data structures seems appropriate. Throughout the book, and particularly in Chap. 1, we follow the theory and terminology expounded by Hoare and realized in the programming language Pascal [4]. The essence of this theory is that data in the

Pascal's Triangle is a system of numbers arranged in rows resembling a triangle with each row consisting of the coefficients in the expansion of $(a + b)^n$ for $n = 0, 1, 2, 3$. The construction of the triangular array in Pascal's triangle is related to the binomial coefficients by Pascal's rule. Before going through the Pascal's triangle algorithm and flowchart, here's a look at it's properties, and more importantly how the triangle is generated.
