After he was handed an old broken-down bamboo fly rod, Frank Soos waited several years before he cautiously undertook its restoration. That painstaking enterprise becomes the central metaphor and the unifying theme for the captivating personal essays presented here. With sly wit and disarming candor, Soos recounts fly-fishing adventures that become points of departure for wide-ranging ruminations on the larger questions that haunt him. Coming to terms with his new rod in "On Wanting Everything," Soos casts a skeptical eye on the engines of consumerism and muses on the paradox of how a fishing rod that becomes too valuable ceases to be useful. "The Age of Imperfection" begins as a rueful account of his botched repair work but soon changes into an insightful reflection on the seductiveness of perfection and finishes as an homage to the creative power that comes from mistakes. In "Useful Tools" Soos takes a decidedly pessimistic look at the age-old quest to combine the good with the beautiful and concludes with an eloquent appreciation of a good tool put to an unintended use. "On His Slowness" offers fresh new perceptions about the human costs of the ever-accelerating pace of contemporary life and the increasingly hard work of resisting it. More than a meditation on suicide, "Obituary with Bamboo Fly Rod" engages the issue of individual human responsibility and the ultimate question of "How to be" with equal parts humility and wonder. This elegant volume is handsomely illustrated with the full-color paintings of Alaskan artist Kesler Woodward. Rich in wisdom and physical appeal, Bamboo Fly Rod Suite is a distinctive and rewarding book with wide-ranging appeal.

Spatial thinkingâ€œa constructive combination of concepts of space, tools of representation, and processes of reasoningâ€œuses space to structure problems, find answers, and express solutions. It is powerful and pervasive in science, the workplace, and everyday life. By visualizing relationships within spatial structures, we can perceive, remember, and analyze the static and dynamic properties of objects and the relationships between objects. Despite its crucial role underpinning the National Standards for Science and Mathematics, spatial thinking is currently not systematically incorporated into the K-12 curriculum. Learning to Think Spatially: GIS as a Support System in the K-12 Curriculum examines how spatial thinking might be incorporated into existing standards-based instruction across the school curriculum. Spatial thinking must be recognized as a fundamental part of K-12 education and as an integrator and a facilitator for problem solving across the curriculum. With advances in computing technologies and the increasing availability of geospatial data, spatial thinking will play a significant role in the information-based economy of the 21st-century. Using appropriately designed support systems tailored to the K-12 context, spatial thinking can be taught formally to all students. A geographic information system (GIS) offers one example of a high-technology support system that can enable students and teachers to practice and apply spatial thinking in many areas of the curriculum.

An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

Provides analytical annotations and information including price, frequency, publisher, and audience, for over 1,200 periodicals for children, young adults, and teachers, librarians, and parents.
