~~Supersaturated Solution~~

~~Definition~~

A supersaturated solution is a solution that contains more than the average solvent that can be dissolved at a given temperature. The recrystallization of the excess dissolved solvent in a supersaturated solution can be started by inserting a tiny solute crystal, called a seed crystal.

Definition & Example - Video ...~~

A supersaturated solution is a solution with more dissolved solute than the solvent would normally dissolve in its current conditions. Supersaturation is achieved by dissolving a solute in one set of conditions, then transferring it to other conditions without triggering any release of the solute. Supersaturated solutions are extremely unstable, but often require a triggering event to begin returning to a stable state via the solute coming out of solution.

**Definition** of supersaturated solution 1) A solution that contains a higher than saturation concentration of solute; slight disturbance or seeding causes crystallization of excess solute.

~~Definition of supersaturated solution — Chemistry Dictionary~~  
Supersaturation occurs with a chemical solution when the concentration of a solute exceeds the concentration specified by the value equilibrium solubility. Most commonly the term is applied to a solution of a solid in a liquid. A supersaturated solution is in a metastable state; it may be brought to equilibrium by forcing the excess of solute to separate from the solution. The term can also be applied to a mixture of

## Supersaturated Solution

### Definition

A supersaturated solution, on the other hand, is when the excess of solute is dissolved in the solvent as a result of changes in temperature, pressure or other conditions. At room temperature, a saturated solution keeps the maximum possible amount of solute, and the rest becomes excess.

~~Definition~~ Supersaturated, a possibility not allowed for in the theory.

~~SUPERSATURATED | meaning in the Cambridge English Dictionary~~

In a supersaturated solution, there is more dissolved solute than in a saturated solution. The solute can easily fall out of solution by crystallization or precipitation. Special conditions may be needed to supersaturate a solution. It helps to heat a solution to increase solubility so more solute can be added.
