Viruses And Prokaryotes Study Guide

Intro to Prokaryotes and Viruses. Prokaryotes are microscopic organisms that include the domains Bacteria and Archaea. Prokaryotes lack a nucleus, and they have no organelles except ribosomes. The hereditary material exists as a single loop of double-stranded DNA in a nuclear region, or nucleoid. Prokaryotic cells multiply by an asexual process called binary fission.

Biology Viruses and prokaryotes study guide Flashcards ...

Viruses consist of a central core of either DNA or RNA surrounded by a coating of protein. The core of the virus that contains the genes is the genome, while the protein coating is the capsid. Viruses have characteristic shapes. Certain viruses have the shape of an icosahedron, a 20-sided figure made up

Prokaryotes and Viruses PPT.pdf - PROKARYOTES AND VIRUSES ...

-A virus enters a cell and immediately starts running copies of itself and causes the cell to burst(lyse).-Bacteriophage T4 creates this type of infection.-It has a DNA core inside a protein capsid that binds to the surface of the host cell.-The virus then injects its own DNA into the cell, and this cell starts to make mRNA from the viral genes.

Viruses and Prokaryotes Questions and Study Guide ...

Prokaryotes include several kinds of microorganisms, such as bacteria and cyanobacteria. Eukaryotes include such microorganisms as fungi, protozoa, and simple algae. Viruses are considered neither prokaryotes nor eukaryotes because they lack the characteristics of living things, except the ability to replicate (which they accomplish only in living cells).

Introduction to Prokaryotes, Eukaryotes

Prokaryotic ribosomes contain protein and ribonucleic acid (RNA) and are the locations where protein is synthesized. Prokaryotic ribosomes have a sedimentation rate of 70S, and are therefore known as 70S ribosomes. (Eukaryotic cells have 80S ribosomes.) Certain antibiotics bind to these ribosomes and inhibit protein synthesis.

A typical virus is composed of a core of DNA or RNA surrounded by a protein coat called a capsid. Viruses that infect bacteria are called bacteriophages. They enter living cells and, once inside, use the machinery of the infected cell to produce more viruses. Viral Infections Viruses have two methods of infection once inside a host cell.
